DeWALT FLEXVOLT 60V MAX*
6 1/2" Track Saw

DeWALT's **FLEXVOLT**® 60V MAX* 6 1/2" Track Saw (DCS520) is a battery-powered track saw capable of an on-track cut depth of 2 1/8" at 90° and 1 5/8" at 45°. Straight plunge

and parallel-link plunge mechanisms are included. An anti-kickback function with integrated shoe and variable speed motor stops the saw from moving backwards along the rail or from climbing out of the workpiece when making plunge cuts, without any user adjustment necessary. The Track Saw has a variable speed motor with no-load speeds of 1,750 to 4,000 rpm, weighs 12.5 pounds and has a bevel capacity of 47°. A 6.5", 42-tooth blade is included with the saw. The DCS520 is available as a kit (DCS520ST1) with a 59" Track and 60V MAX* battery for \$579, as well as kitted with battery only and as a bare tool. The 59" Track, as well as 46" and 103" tracks are also available separately.

Re-Grip

Briggs & Stratton Q6500
QuietPower Series inverter
generator

Bosch Carbide for All-Purpose and Carbide for High-Pressure Laminates jigsaw blades

Re-Grip (a division of **Preval**) is a product that adds or replaces a grip to any tool, handle or lever in a tool-less installation process. The elastic grip is held extended by an inner coil, forming a tube that fits over the handle. Pull a tab to unwind the coil, and the grip shrinks and compresses securely to size. The non-slip grips are made out of recycled materials that can withstand up to 400° of heat and are designed ergonomically to reduce muscle fatigue and help prevent blisters. Re-Grip is available in three different sizes: small, for tools with a maximum diameter of 1.1"; medium, for tools with a maximum diameter of 1.5"; and large, for tools with a maximum diameter of 2". Suggested pricing is \$9.99, \$10.99 and \$11.99.

Briggs & Stratton says their new **Q6500 QuietPower™ Series** inverter generator, at 128 pounds, with a length of 25 1/2" and width and height just over 21", is 60% quieter, 30% lighter and 45% more compact than a standard generator. It delivers 6,500 starting watts and has a runtime of up to 14 hours at 25% load. An impact-resistant shell encloses an all-steel frame for additional noise reduction. Multiple outlets (four 120V-20A, two USB and one 120V-240V) allow you to

power a variety of electronics and devices at the same time, and a suitcase-style telescoping handle makes it easy to move the Q6500 generator around. Suggested price is \$1,499.

The **Bosch Carbide for All-Purpose** and **Bosch Carbide for High-Pressure Laminates (HPL)** jigsaw blades use a Bosch-exclusive carbide brazing technology to extend the life of these blades 10 times longer than standard bi-metal blades, making them tough enough to withstand a nail hit and keep going. Progressor® technology is a combination of aggressive small teeth that work together with larger teeth to increase speed and life, while the blade's exaggerated tip ensures easy plunge cuts. A tapered-ground back design on the blades also helps to optimize blade speed, while a thin kerf reduces both material extraction and heat. Both new types of Bosch jigsaw blades are sold in single and three-packs, with suggested pricing for the All-Purpose three-pack (item T367XHM3) at \$29.97 and the Laminates three-pack (item T128BHM3) at \$24.97.
